AMENDMENT TO THE CLAIMS

RECEIVED CENTRAL FAX CENTER

JUN 2 9 2007

[c01] (Currently Amended) A system for viewing contents of a source computer via a computer network, the system comprising:

means for associating a calling party's telephone number with a network address of the source computer;

means for storing a result of the associating;

means for detecting a triggering event; and

in response to the triggering event,

means for retrieving the network address from the memory,

means for establishing a voice session between the calling party and a called party.

means for establishing a first data session between the calling party's device and the source computer, and

means for establishing a second data session between a called party's device and the source computer

a telephone line in communication with a telephone network;

a display device associated with the telephone line; and

a communication link between the display device and the computer network, wherein when a triggering event associated with the telephone line is detected, contents of the source computer are displayed on the display device during a data session via the communication link.

[c02] (Currently Amended) The system of claim 1, <u>further comprising means for detecting</u>
wherein the triggering event is detected before the a voice session is established between
the a calling party and the a called party.

- [c03] (Currently Amended) The system of claim 1, <u>further comprising means for detecting</u> wherein the triggering event is detected after the a voice session is established between a calling party and a called party.
- [c04] (Currently Amended) The system of claim 1, <u>further comprising means for terminating</u>
 the first data session when wherein a termination of the voice session ends the data session.
- [c05] (Currently Amended) The system of claim 1, <u>further comprising means for continuing</u> wherein the <u>second</u> data session continues after the voice session is terminated.
- [c06] (Currently Amended) The system of claim 1, <u>further comprising means for continuing the</u>
 <u>first data session after the voice session is terminated</u> wherein the telephone line is
 <u>associated</u> with one of a called party and a calling party.
- [c07] (Currently Amended) The system of claim 1, <u>further comprising means for associating</u> wherein the source computer is associated with one of a called party, a calling party, and a third party.
- [c08] (Cancel)
- [c09] (Cancel)
- [c10] (Cancel)
- [c11] (Currently Amended) A method for enabling a party of a telephone call to view contents of a source computer via a computer network, comprising the steps of:

associating a <u>calling party's</u> telephone number of a telephone line with a network address of the source computer;

storing a result of the <u>association</u> associating step in a memory accessible to an equipment associated with the party, wherein the equipment is associated with a display device;

detecting a triggering event on the telephone line; and in response to the triggering event,

retrieving the network address from the memory,
establishing a voice session between the calling party and a called party,
establishing a first data session on a communication link between the
calling party's device display device and the source computer, and
establishing a second data session between a called party's device and the
source computer

displaying contents of the source computer on the display device during the data session.

- [c12] (Original) The method of claim 11, wherein the network address is an Internet Protocol address.
- [c13] (Original) The method of claim 11, wherein the network address is an uniform resource locator.
- [c14] (Currently Amended) The method of claim 11, wherein the result of the associating step is stored in a database located within.
- [c15] (Currently Amended) The method of claim 11, wherein detecting the triggering event comprises acquiring the calling party's an acquisition of a telephone number of a calling party.
- [c16] (Currently Amended) The method of claim 11, wherein detecting the triggering event comprises acquiring an acquisition of a dial string generated by the equipment.

- [c17] (Cancel)
- [c18] (Cancel)
- [c19] (Currently Amended) The method of claim 11, wherein the source computer is associated with an entity other than the <u>calling</u> party and the called party.
- [c20] (Cancel)
- [c21] (Currently Amended) A system for enabling a user to view contents of a source computer via a computer network, the system comprising:

means for storing associations between a voice and data communications addresses associated with the user and network addresses of source computers;

an equipment device associated with the equipment;

means for detecting wherein when an attempt is being made to establish a voice session using a voice communications link of the voice and data communications address, the equipment obtains a dialed communications address associated with the attempt, uses the dialed communications address to retrieve a network address of the source computer, and establishes a data session with the source computer using a data communications link of the voice and data communications address, and

means for obtaining a dialed communications address associated with the attempted voice session;

means for retrieving a network address associated with a calling party's communications address and with the dialed communications address;

means for establishing the voice session between the calling party and a called party:

means for establishing a first data session between the calling party's device and the source computer;

means for establishing a second data session between the called party's device and the source computer; and

means for displaying wherein contents of the source computer is displayed on the display device during the data session.

- [c22] (Currently Amended) The system of claim 21, <u>further comprising means for collecting</u>
 the dialed communications address during wherein the attempt is made by the user, and wherein the equipment is adapted to collect digits dialed by the user.
- [c23] (Currently Amended) The system of claim 21, <u>further comprising means for collecting</u>
 the calling party's communications address wherein the attempt is made by a calling
 party other than the user, and wherein the equipment is adapted to collect a telephone
 number of the calling party.
- [c24] (Currently Amended) The system of claim 21, further comprising means for terminating the first data session when the voice session ends a memory accessible by the equipment, wherein the memory comprises the dialed communications address and the network address of the source computer.
- [c25] (Currently Amended) The system of claim 21, wherein the data session uses TCP/IP further comprising means for terminating the first data session when the voice session ends.
- [c26] (Original) The system of claim 21, wherein the network address of the source computer is one of an Internet protocol address and a uniform resource locator.
- [c27] (Cancel)
- [c28] (Original) The system of claim 21, wherein the source computer is associated with a third party unrelated to the voice session.
- [c29] (Cancel)

- [c30] (Cancel)
- [c31] (Cancel)
- [c32] (Cancel)
- [c33] (Cancel)
- [c34] (Cancel) .
- [c35] (Cancel)
- [c36] (Cancel)
